Vision

Creating the widest supply chain of specialized goods and services in the oil, gas, petrochemical and steel industry according to the latest technology and international standards.

Mission

In order to protect national interests and increase domestic production capacity, by creating suitable infrastructure and through financial investment, as well as using technical and expert labors, in the fields of engineering and based on the state-of-the-art technology, domestic and foreign trade, manufacturing knowledge-based equipment and using new industrial technologies in supplying goods and technological and knowledge-based equipment in the oil, gas, petrochemical and steel industry, in addition to meeting the needs of clients and removing obstacles in domestic production, increasing job creation and providing the possibility of creating conditions for the export of domestically manufactured products and preventing the outflow of foreign currency.

Objectives

- 1-Supplying goods and equipment for the oil, gas and petrochemical industries in accordance with international standards
- 2-Efforts to increase the domestic production capacity through investing in the localization of technologies plus knowledge-based technologies in the oil, gas, petrochemical and steel industries.
- 3-Increasing the employment capacity through investing in technological and knowledge-based projects in the oil, gas and petrochemical industry.

Strategy

- 1- Compliance with the principle of customer orientation through fulfilling contractual obligations and trying to supply goods with the highest quality, according to international standards, in the shortest possible time.
- 2- Adherence to professional principles in constructive interaction with national and international suppliers and manufacturers approved by the Ministry of Petroleum in supplying standard goods.
- 3- Providing technical advice in order to overcome the obstacles of industrial projects in the supply sector.
- 4- Creating a link between the industry and the university through the use of the knowledge of prestigious scientific centers in the country.

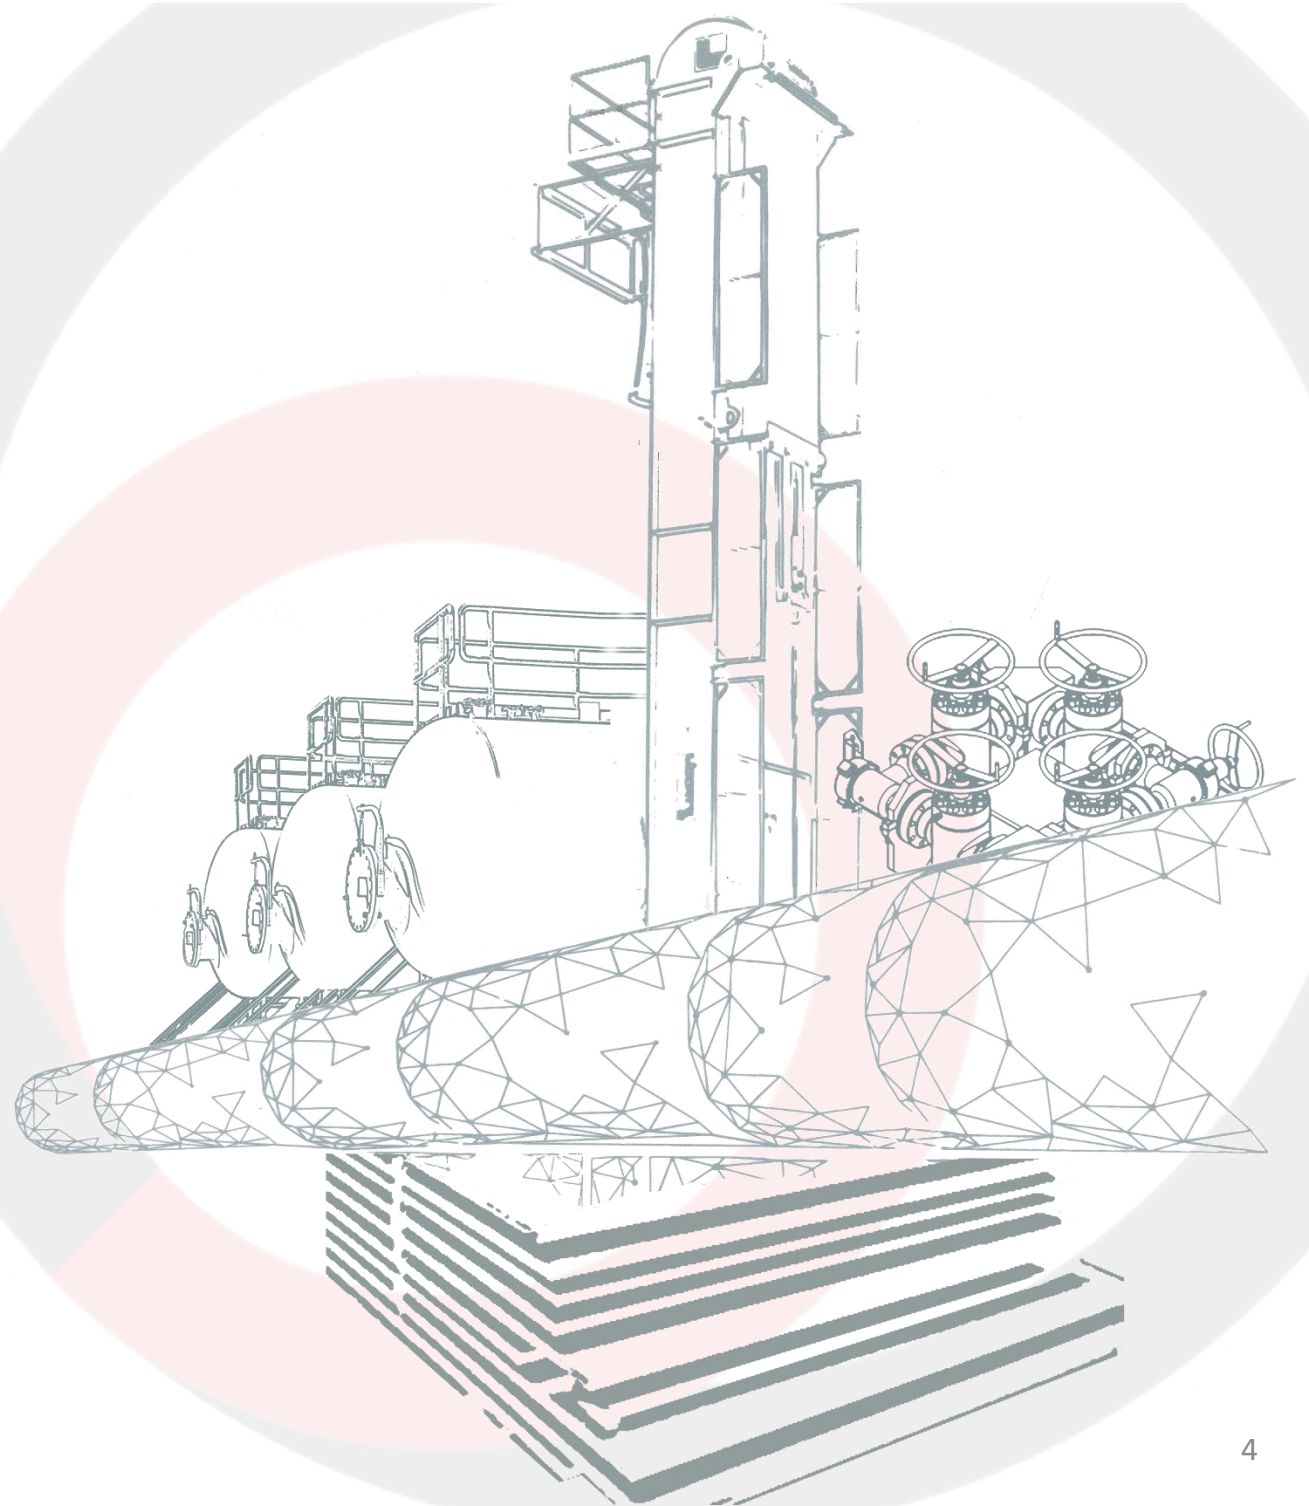

About Us

Oris Oxin Company has started its business as one of main the suppliers and manufacturers of essentials for the Oil, Gas, Petrochemical, Steel refining, Drilling and power plant industries since 2008.

This company is currently one of the largest suppliers of mentioned industries in the country, with the support of years of experience and a brilliant history in the national and international business, as well as a complete mastery of the oil, gas, petrochemical and steel industry markets.

The main activities of this company are as follows:

- Supply chain of alloy sheets and API
- Supply chain of oil and gas pipelines
- Supplying the requirements of the petrochemical and refining industries
- Supplying all kinds of equipment, raw materials and spare parts which are needed by the steel industry
- Designing and production of prefabricated processing and desalination equipment (Skid-Mounted)
- Designing and production of Sucker Road Pumps (SRP)

The Qualifications and Certificates

Based on Oris Oxin's economic policies and relying on technical knowledge, benefiting from an experienced engineering and commercial team and suitable infrastructure, this company has succeeded in obtaining the necessary qualifications and certificates through a legal audit due to having a continuous and stable presence in the projects of the oil, gas, petrochemical and steel industries in addition to joining the approved vendor list of suppliers and manufacturers published by the Ministry of Petroleum.

Designing, Engineering, Construction and Commissioning

**Artificial lifting and
Oil Processing Equipment**

**Industrial High Pressure Valves, Well
Equipment, and Related Supplies**

Born to supply

National and International Trading:

- Supply Chain of Alloy Sheets and API
- Supply Chain of Oil and Gas Pipelines
- Supplying the Requirements of Upstream and Downstream Industries of Oil , Gas and Petrochemicals

With the support of Oris Oxin's expert and committed team of National and International trade, the company has the ability to supply all the equipment, necessities and raw materials which are required by the oil, gas and petrochemical industries.

Moving in line with the organizational vision and trying to meet the needs of the country's industry through investment and human resource management and the continuous efforts of all organizational elements in the implementation of contractual obligations has made this company become one of the successful companies in the field of national and international business in the oil, gas, petrochemical, and steel industries in Iran.

Oris Oxin Company is committed to its organizational mission and moving forward in line with organizational goals, while joining the list of approved suppliers of the Ministry of Petroleum, it has also recorded the honor of working in the national and strategic projects of the country's oil, gas and petrochemical industries in its executive records.

Implementation of large projects of the steel sheets and pipes supply in oil and gas industry as well as supply of specialized equipment for petrochemical and steel industry in recent years is another capability of this company.

Supply Chain of Alloy Sheets and API

Oris Oxin Company is a supplier of all kinds of alloy sheets and API from domestic and foreign manufacturer, based on the needs of the oil, gas, petrochemical and steel industries. This company has the largest stock warehouse of alloy sheets throughout the country and has the necessary capability to meet the related requirements. The most important ones are the following items:

A537 CL1, CL2, A516 Gr.60 & 70, A283 Grade. C, A573 Gr. 70, Grade A

Dimensions of Producible Alloy sheets

Specification	Dimensions of Producible Alloy Sheets	Dimensions of Alloy Sheets for Quenching and Tempering	The Dimensions of Normalized Alloy Sheets
Thickness	8 to 150 mm	10 to 60 mm	10 to 120 mm
Length	2500 to 15000 mm	2500 to 15000 mm	2500 to 15000 mm
Width	1100 to 4500 mm	1100 to 4500 mm	1100 to 4500 mm

The Most Important Steel Plate Supply Projects

Cooperation in the production and localization of A516Gr.70 Nace sheets, for 1 to 5 pump houses of national and strategic project of Goreh-Jask pipeline.

Cooperation in the production and localization of A516Gr.60 Nace sheets, for MBV Valves of national and strategic project of Goreh-Jask pipeline.

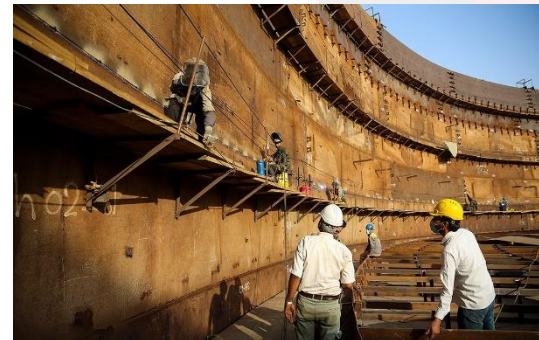

Cooperation in the production and localization of (A516Gr.70 Nace, A283Gr.C Nace sour service) sheets and 6,000 MT of sheets API 5L X60 Nace, API Gr.B Nace of storage tanks of Goreh-Jask .

Cooperation in the production of Sheets (API 5L X60 MS sour service) of the national and strategic project of Goreh-Jask pipeline for the first time in Iran.

Cooperation and supply in production of 300 MT of API 5L X70 PSL2 sheets for national gas company, and cooperation in the production and supply of 200,000 MT of API 5L X60 PSL2 sheets of Koreyt Camp to Omidyeh transmission pipeline

Cooperation and supply in production of 12,000 MT of A516Gr.70+N sheets for Assaluyeh Green Reservoir Project

Cooperation and supply in production of more than 150,000 MT of alloy sheets for industrial projects.

Cooperation in the production and localization of API 5L X70 PSL2 sheets for production of 56" Pipelines for the pipelines of Gas Engineering and Development Company project.

Supply Chain of Oil and Gas Pipelines

One of the most important activities of the Oris Oxin Company is the supply of steel pipes for oil and gas transmission lines in seamless and welded forms which are suitable for sour and sweet services.

The company has put in its agenda the supply of pipes from the stage of slab supply and supply of sheets to covered pipe and this activity is carried out in the form of different frameworks to satisfy the clients of different industries.

Types of Available Pipes

Size	Type of Pipe
From 2.1" to 24"	SMLS Pipes
From 6" to 24"	HFW or ERW Pipes
From 24" to 56"	LSAW Pipes
From 24" to 100"	SSAW Spiral Pipes

The Most Important Pipe Supply Projects

To supply required refinery and petrochemical pipes

To supply and cooperate in the production of a part of the pipes for the national and strategic project of transferring crude oil from Goreh to Jask

To supply and cooperate in the production of more than 400 km of API 5L pipes for provincial gas companies.

The Supply Chain of Upstream and Downstream Oil and Gas Industries

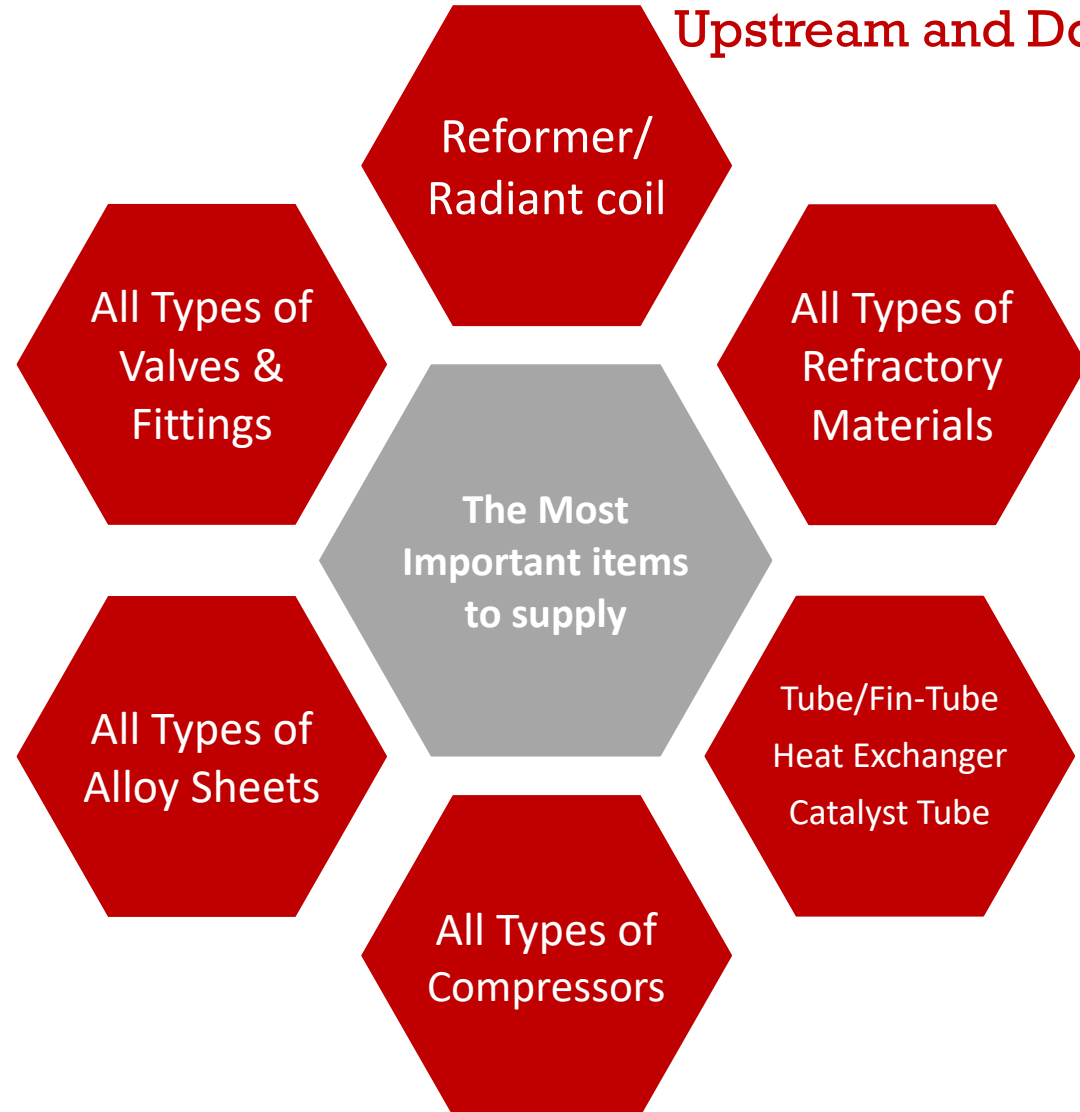

Due to its continuous and active presence in the oil, gas and petrochemical industries, Oris Oxin Company is one of the approved suppliers of goods and equipment which are needed by mentioned industries by Ministry of Petroleum .

Types of Available Equipment

No.	Equipment
1	Types of U-Tube, Fin-Tube, Tube
2	Catalyst Pipes and Manifolds
3	Static Casting Parts, Centrifugal Casting Parts
4	Types of Compressors (Air and Gas, Reciprocating)
5	Types of Refractory Materials Used in Petrochemical Industry Furnaces
6	Pipe Tools

The Most Important items to Supply the Upstream and Downstream Oil and Gas Industries

Supplying All Kinds of Equipment, Raw Materials and Spare Parts Needed in Steel Industries

Oris Oxin Company is able to supply the following materials from domestic and foreign manufacturers and suppliers according to the history of its activity in steel industry.

Types of Available Equipment

Supplying Equipment such as Gearbox, Compressor, Blower
Supplying all Kinds of Spare Parts for the Country's Steel Industry
Supply of Refractory Raw Materials, Ferroalloy
Providing All Kinds of Conveyors, including Side Wall, Steel Lord, EP
Supplying Reformer Pipes for Reclamation Plants

Branches and Facilities

Our holding group, enjoys an excellent reputation and unquestionable confidence in all mentioned industries for more than a decade. it has an annual turnover of 500 million Euros and 60,000,000 Euro Bank credit and over 150 full-time staff plus 7 business partners in South Korea, Brazil, China, UAE and Germany.

Oris Oxin headquarter is located in Tehran while other branches are in Isfahan and Ahwaz.
Our sister companies are:

- 1- Huma Pasargad Energy kish Co. (2000 m^2) - Oil Processing Equipment
- 2- AFSAN Eng. Co. (4000 m^2) – High pressure Valve & Wellhead Equipment

Other facilities:

- 1- Manufacturing plant – Skid-Mounted Equipment (14000 m^2)
- 2- Manufacturing plant – Oil Artificial lifting Equipment (7000 m^2)
- 3- Warehouse (7000 m^2)

International Commercial Partners

HJ METAL KOREA

HJ METAL KOREA Co. is located at the Republic of Korea as the sister company of Oris Oxin which is active in the field of providing all kinds of steel, alloy fittings and valves including Ball Valve, Gate Valve, Globe Valve, Control Valve, Butterfly Valve, Choke Valve for sour and sweet fluids, and valid international standards in different dimensions, sizes, and working classes in sizes from 1.2 to 72 inches and classes from 150 to 2500.

Designing, Engineering, Manufacturing and Commissioning

- **Designing, Engineering, Manufacturing of the Oil Lifting and Processing Equipment**
- **Industrial High-Pressure Valves, Well Equipment and Related Supplies**

Designing, Engineering, Manufacturing of the Oil Lifting Equipment

Oris Oxin Company has always played an active role in the field of investing in new and knowledge-based technologies in the oil, gas, and petrochemical industries based on its organizational strategic policies in order to achieve self-sufficiency in domestic production and the promotion of the country's oil industry.

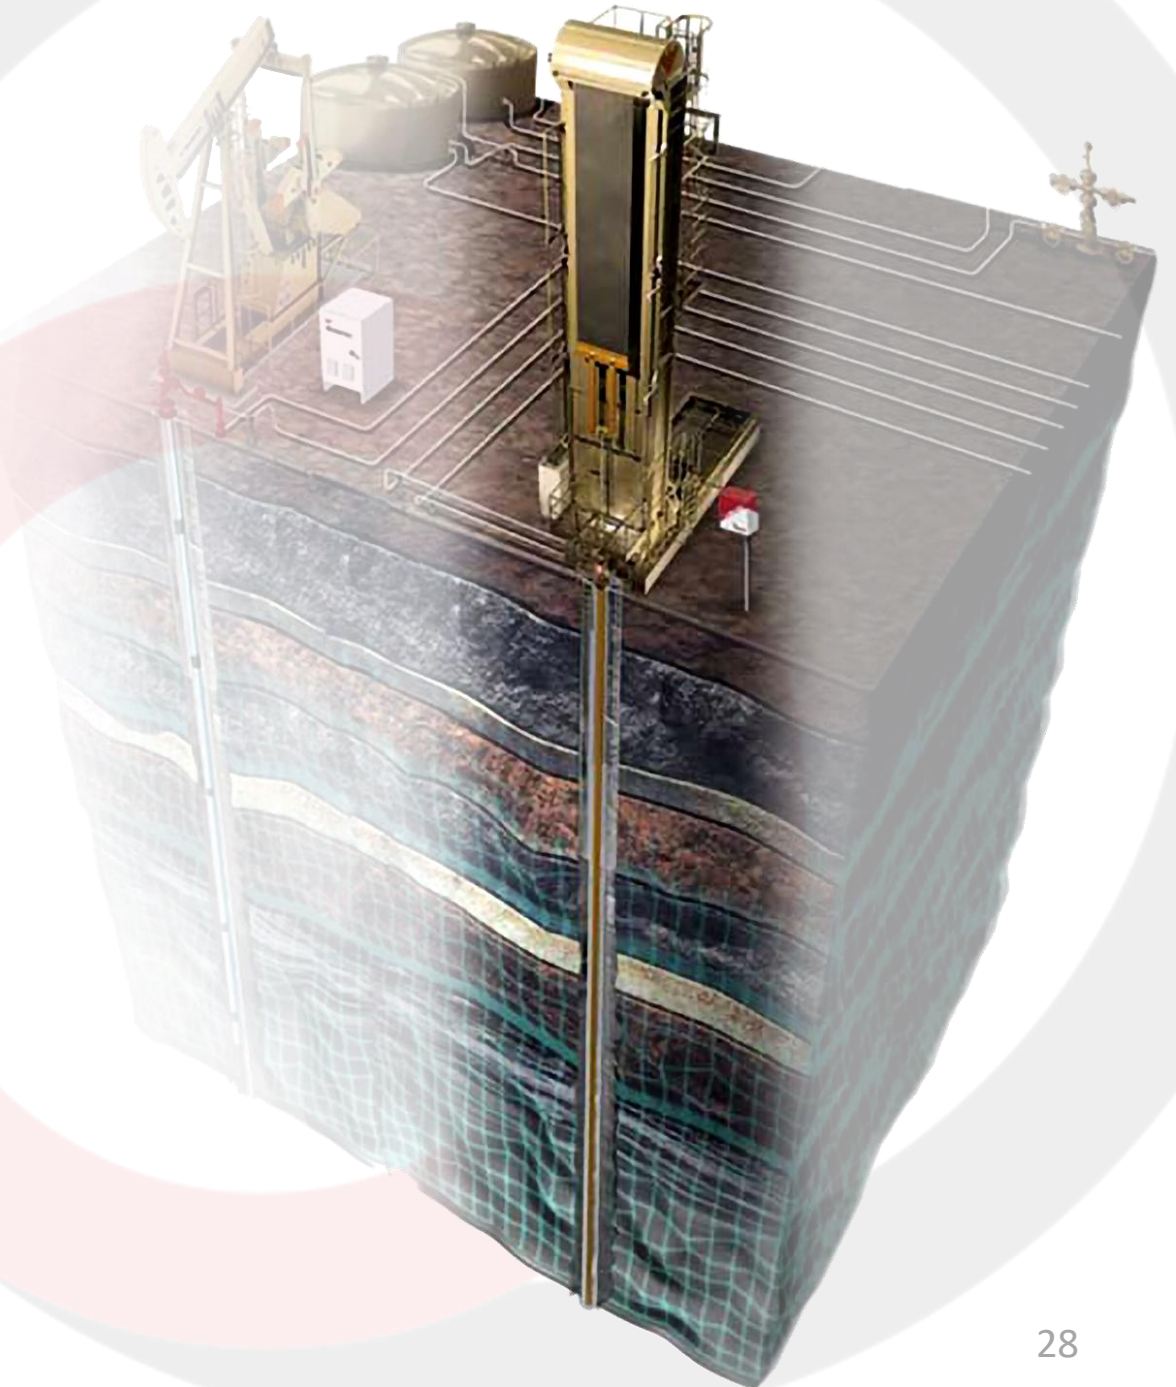

In this regard, with the aim of increasing domestic production capacity and localizing equipment related to these industries, in cooperation with its domestic and international strategic partners and by taking advantage of the knowledge and expertise of Iranian engineers and specialists, while localizing one of the important and strategic lifting equipment of the oil industry (Sucker Rod Pump - SRP), it also reached an important success in the field of design, manufacture, supply and operation of this equipment and provided such services according to international standards and the standards required by the Ministry of Oil of Iran, that was a very significant achievement, and it has been able to join the list of approved manufacturers of Ministry of Petroleum by adhering to the world's engineering principles and complying with technical standards.

Presently, this company is able to provide engineering, designing , manufacturing , consulting and supporting services for the mentioned equipment.

SRP (Sucker Rod Pump)

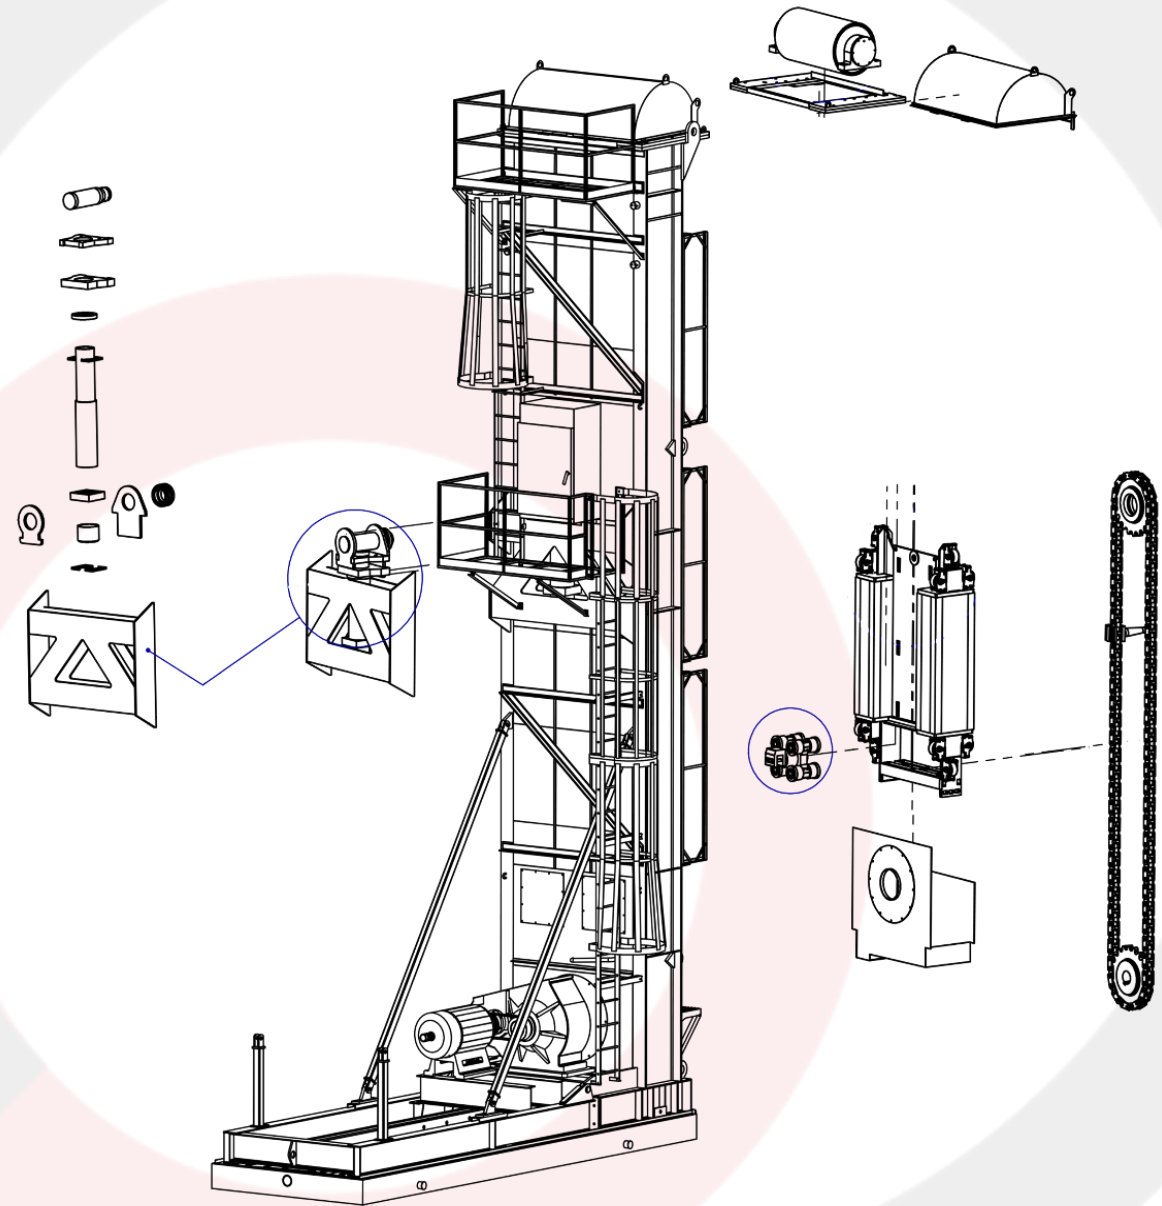

One of the most functional ways for lifting oil in low-pressure wells is Sucker Rod Pump (SRP). The most important advantages of the sucker rod pump compared to the other oil lifting equipment are high speed of installation and operation plus low depreciation , repair expenses and technical support.

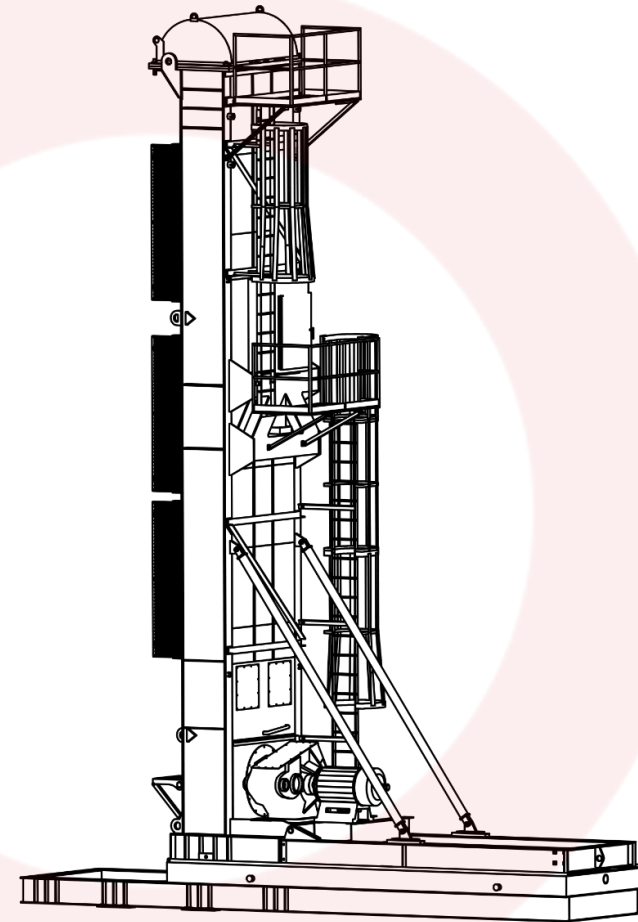

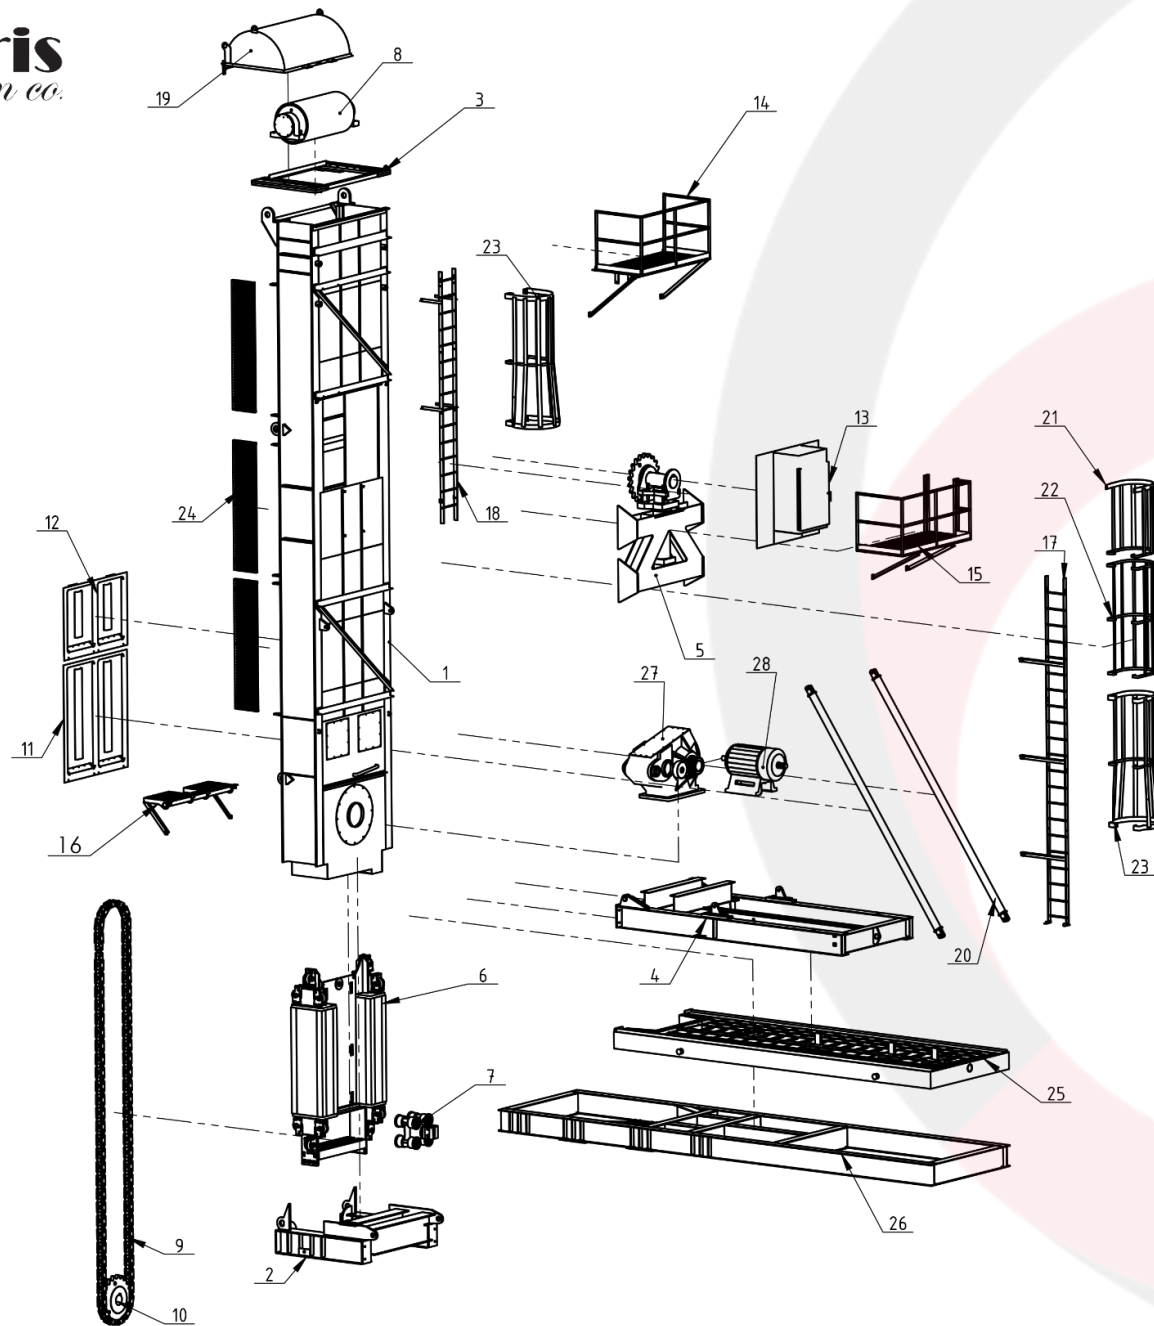

Design and Engineering

Oris Oxin has made extensive investment in localizing the knowledge of designing, manufacturing, installing and commissioning of Sucker Rod Pump equipment due to the importance of this equipment in increasing oil extraction power and many advantages compared to the other oil lifting equipment. This company has provided the construction and facilities of production workshops with an area of approximately 10,000 square meters plus hiring experienced technical staff.

Also, this company has taken effective steps in this field by concluding scientific and research contracts with the most prestigious scientific centers of Iran, such as Sharif University of Technology and Shahid Chamran University of Ahvaz in order to optimize, improve the performance and compatibility of the mentioned equipment with the conditions of Iran's oil wells.

Engineering, design and production of high pressure Valves, Wellhead equipment and related Oil and Gas industry requirements

In order to complete its supply chain in the production of lift and process equipment, as well as better control of manufactured goods and time and cost management, Oris Oxin Company has added AFSAN Engineering Company (one of the knowledge-based manufacturing companies approved by the Ministry of Petroleum) to its group so that it can create more coordination between its production sub-categories in the artificial lift and process equipment sector.

The Qualifications and Certificates

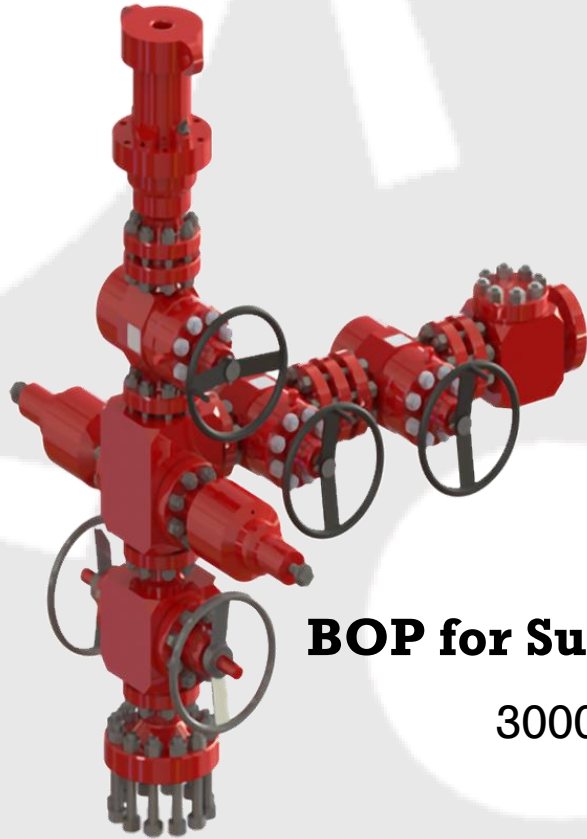

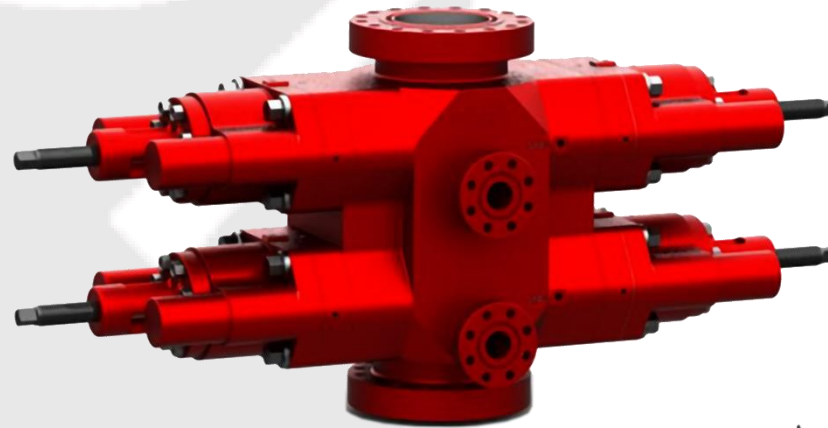

Engineering, design and production of high pressure Valves, Wellhead equipment and related Oil and Gas industry requirements

AFSAN Engineering Company has appropriate infrastructure and technical staff who are experts and experienced in engineering, design and manufacturing of high-pressure valves in the oil and gas industry, as well as the well sets and equipment, and thus, it is one of the knowledge-based companies in the country, which has the ability to produce a wide range of high-pressure valves and well equipment and provide engineering services, design and manufacturing of said equipment in accordance with the technical specifications required by its clients.

Designing, Engineering, Manufacturing, Installing and Commissioning of Oil Processing Equipment

Some advantages of the new desalination technology are as follows:

- ❖ No need for chemicals
- ❖ No need to use electricity in order to separate salt
- ❖ The ability to separate the water that comes with the oil, with a high degree of purity
- ❖ No need for input pumping and pressure boosting system

The Qualifications and Certificates

Oris Oxin has extensive activities in the field of engineering, designing, manufacturing, and commissioning of some of the most important equipment related to oil processing operations by using the knowledge and expertise of Iranian engineers and continuous and consistent cooperation with other domestic manufacturers, through one of its subsidiary companies (Huma Pasargad Energy Kish Company) as follows:

- ❖ MOT/MOS
- ❖ Skid Mounted Flare Stack
- ❖ Skid Mounted Pressurized Storage Tank
- ❖ De-oiling Unit
- ❖ Steam Exchanger
- ❖ Skid mounted Heater
- ❖ EPF Equipment

This company is ready to provide services such as engineering, designing, manufacturing and commissioning for the mentioned equipment in the form of various contracts, including EPCF, EPC, EP, BOO and BOT with the support of its experts' knowledge plus using the invested infrastructure to all its clients in the Oil industry.

Design, Engineering, Manufacturing, Installation and Commissioning of Oil processing Equipment

This company has succeeded in localizing the mobile oil lift equipment and facilities based on the latest technologies in the world by taking advantage of the appropriate infrastructure and the knowledge of expert Iranian engineers through one of its partner companies (Huma Pasargad Energy Kish Company) and in line with the excellence of the country's oil and gas industry.

One of this equipment is a mobile desalination equipment. The company is able to design and produce this equipment domestically through the localization of the Sepflutech Company's technology, as one of the knowledge-based companies in Germany in the field of oil lifting. The prototype of this equipment is currently installed in Maron 5 operation unit in Khuzestan province.

The mentioned technology is one of the most practical and cost-effective desalination technologies in the world due to the lack of electricity consumption and chemical additives. In addition to the high purity of the output oil.

It plays a significant role in protecting the environment due to the reduction of possible pollution in addition to reducing the cost of oil processing owing to not using electricity and chemical additives, and this is one of the most important advantages of the mentioned technology over other technologies of oil processing.

The other advantage of this equipment (skid-mounted) would be easier installation and transportation in compare to the similar equipment which enables easy and very low-cost relocation for each operating unit.

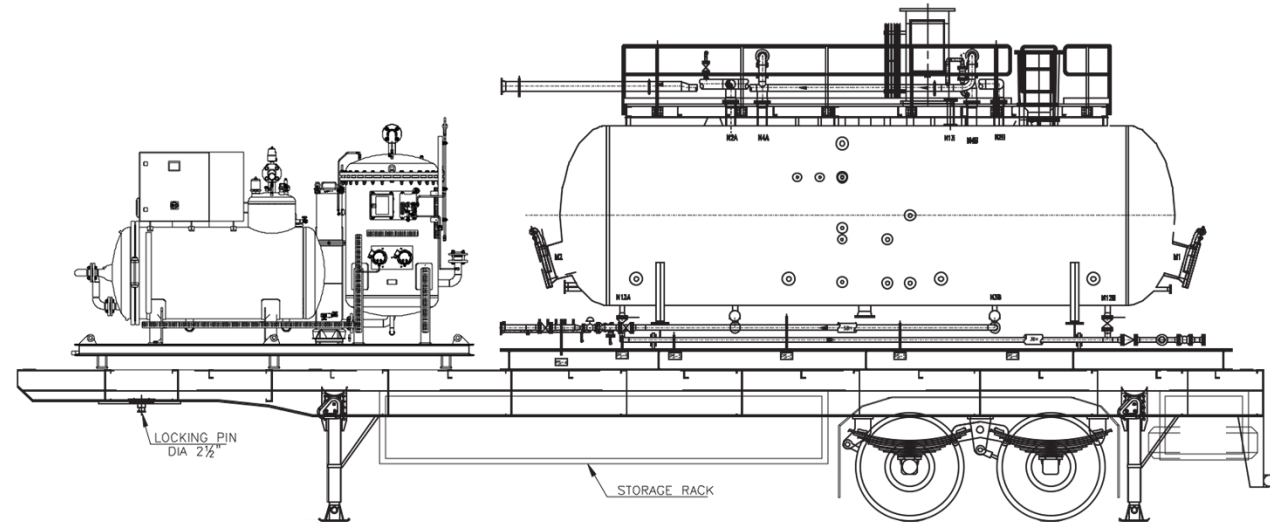

As one of the approved producers by the Ministry of Petroleum, this company has the ability to provide engineering, designing, manufacturing and commissioning services for all operating companies through the creation of appropriate infrastructure and the completion of technical and experienced staff.

Processing Units

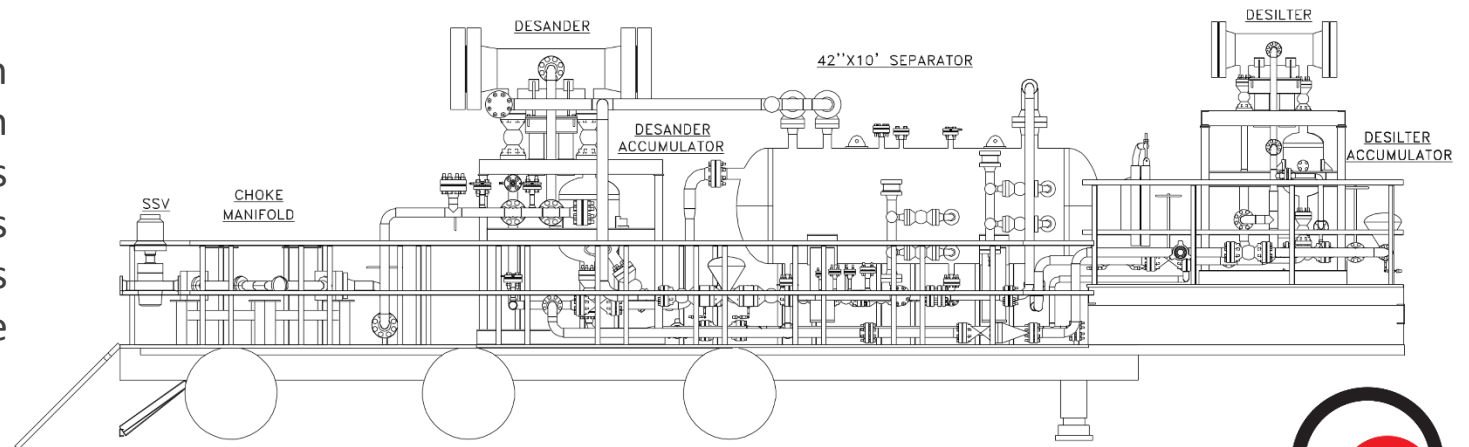

All stages of engineering, design and manufacturing are carried out by the experienced and expert team of this company.

All designs are done based on the technical specifications desired by the clients and current world standards.

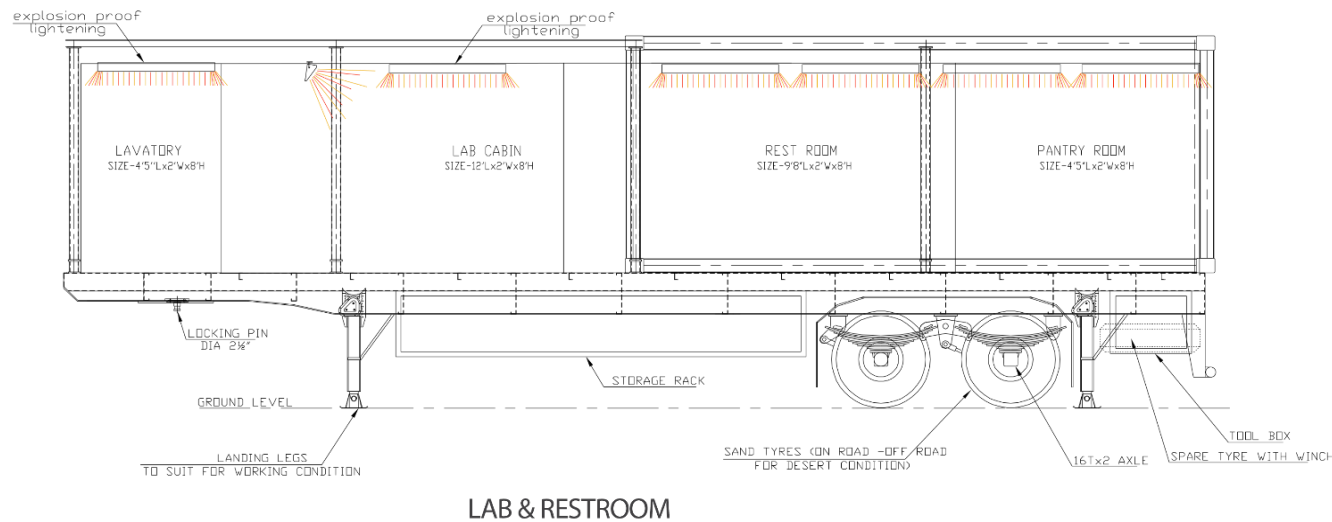

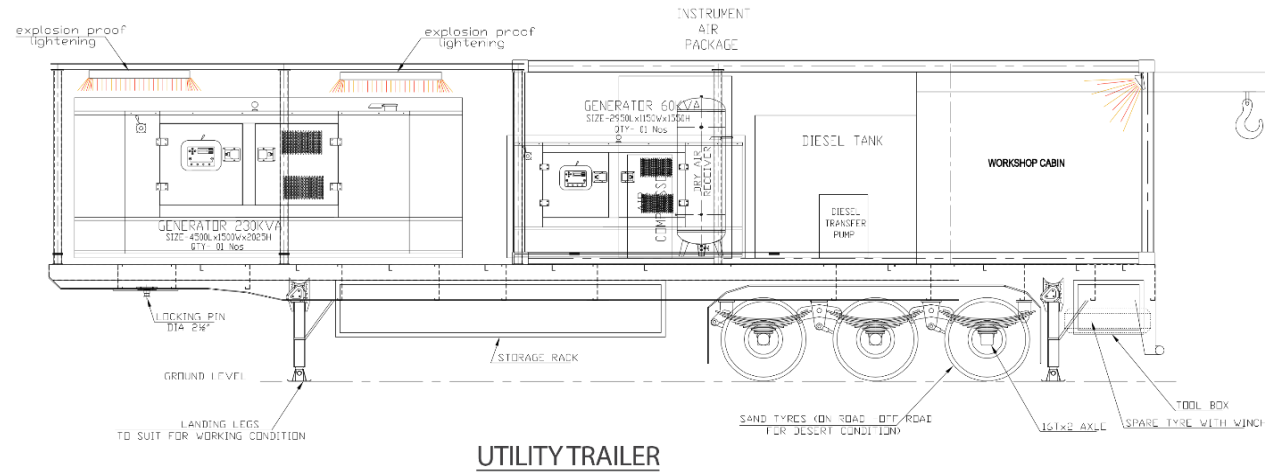

Our engineering and design team continuously monitors all stages of design and manufacturing progress and examines the technical specifications of the projects carefully and, if necessary, provides technical solutions to optimize the requested design by the client.

DESALTER & DEOILER

SEPARATOR & DESANDER

Processing Units

All construction steps are carried out according to standard instructions and under the direct supervision of the engineering team.

Production team, delivers a standard product in accordance with the engineering drawings to the launch team by using modern knowledge and equipment.

This company has the possibility of providing processing equipment operation services in all parts of the world with the support of its experienced and committed operation team, as well as the executive experience in same projects.
